- costs back + little profit,
- socially responsible

Property requirements

Underpriced Properties at a good condition

Looking for cheaper properties in good condition to avoid additional renovation investment

Projected Revenue upon Sale (Year 10)

Focusing on locations with growth potential

Low-income population

Targeting lower-to-middle-income areas for stable rental income and social impact

Average Price Gain by Neighborhood (2015-2025)

High-need areas saw the largest % gains — driven by low 2015 base prices, not rising wealth.

1st Hypothesis

More than 50% of the houses in low-income zones have lower sale price per square meter, than the medians price of the whole dataset.

Low-income population

Projected Revenue upon Sale
(Year 10)

Underpriced Properties at a
good condition

1st Hypothesis

More than 50% of the houses in low-income zones have lower sale price per square meter, than the medians price of the whole dataset.

2nd Hypothesis

More than 60% of waterfront houses in low-income zone have lower grade rating, than the dataset average.

Low-income population

Projected Revenue upon Sale
(Year 10)

Underpriced Properties at a
good condition

2nd Hypotheses

More than 60% of waterfront houses in low-income zone have lower have lower grade rating, than the dataset average.

3rd Hypothesis

Lower income zones yield the highest concentration of properties with condition rating 4+ and price (per square meter), lower than dataset median.

Low-income population

The diagram consists of two dark blue rectangular boxes positioned side-by-side. The left box has a teal vertical bar on its left edge and contains the text 'Low-income population'. The right box has a purple vertical bar on its left edge and contains the text 'Underpriced Properties at a good condition'.

Underpriced Properties at a
good condition

3rd Hypotheses

Lower income zones yield the highest concentration of properties with condition rating 4+ and price (per square meter), lower than dataset median.

Concentration of properties in low vs high income zones

Legend

- High income zone,
0.95 properties per sq mi
- Low income zone,
2.54 properties per sq mi

Thank you
